

QUESTIONS AND ANSWERS

SELECTING MOODLE PARTNER FOR UPGRADING THE ISO DIGITAL LEARNING PLATFORM

This is a summary of answers provided via emails on the questions of suppliers who have expressed interest in this RFP. This summary follows a Q&A format. Where information given did not deviate/vary from the information provided in the RFP document, it has not been included here.

Q1: What is the current Moodle version?

The current version is 3.9.

Q2: What are the existing plugins and customizations made?

The current ISO Moodle platform will be shut down once the new platform is configured and in operation. The new supplier will be responsible to install new external plugins and make customizations to meet the ISO requirements.

Q3: here are elements of the requirements which would suit a platform based on Totara (a Moodle derivative). Would this option be considered by ISO, or will consideration only be given to Moodle solutions?

ISO is only interested in Moodle solutions.

Q4: Are you able to specify the required plugins at this point, or should the tender include a 'per plugin' charge?

At this stage, the supplier needs to include a 'per plugin' charge in the tender document.

Q5: Do you have a use case for the functional requirement # 26? Does this test student user need to have the same privileges as a regular student but have the added capability to see courses visible to only administrators?

Yes, the test student user needs to have the same privileges as a regular student but have the added capability to see courses visible to only administrators.

Q6. With reference to the functional requirement # 28, will there be a requirement for user participation data to be imported to the new Moodle LMS for courses that will not be imported as part of the migration of content?

The user participation data that will be imported into the new Moodle should be part of content migration.
