The European Association for Biometrics (EAB) invites to training
- on ISO/IEC standards: September 15th 2020
- on biometric essentials: September 17th and 18th 2020

Darmstadt, Germany

The European Association for Biometrics (EAB) will organize expert training on biometric ISO/IEC standards as well as a training for newcomers on biometrics essentials. The training events are part of the Darmstadt Biometric Week running from September 14th to 18th, 2020. The training events will provide an opportunity to learn first-hand from world-leading experts both the importance and details of the new biometric ISO/IEC standards and the fundamentals of the biometric technology.

Both training events are aimed at a wide range of stakeholders including industrial and governmental developers and end-users, technology integrators, researchers, academics and post-graduate students, and policy makers.

Due to the COVID-19 crisis the training is planned as events that can be attended virtually.

The training on ISO/IEC standards will be focused on all biometric related standards developed by ISO, with especial attention to the most recently established like the new extensible biometric interchange formats. The training will take place during the EAB Research Projects Conference (EAB-RPC):
https://eab.org/events/program/195

The training on biometric essentials will be focused on the fundamentals of biometric algorithms and its applications. It will take place in parallel to the BIOSIG conference. For more information visit:
