ISO 9001 Auditing Practices Group
Guidance on:

AUDIT PLANNING

There are two levels of planning – the audit programme (identifying the audit activities during the certification cycle) and the audit plan (showing how a single audit is planned).

The important areas of the organisation and areas where there has been recent change or past non-conformity should be scheduled as a priority. Audits may need to be timed to suit the cycles of production or other activities, particularly if seasonal or sporadic. So, although one may have heard that all processes/areas need to be audited every year, it would be quite acceptable to take a risk-based approach and to audit some areas less frequently and instead focus on specific critical areas in a single year provided there is recorded justification.

How does one develop a programme?
If the certification client operates shifts, it would be wise to find out what happens on the evening and/or night shifts. Organizations may operate all shifts identically but, in others, the night shift may operate without appropriate supervision and/or technical support. Please, see clause 9.1.3.5 of ISO/IEC 17021-1.

The audit programme should ensure that the scope of each audit event is clear. An audit programme can be changed to suit changing circumstances (e.g. availability of auditee, availability of resources, holidays etc.) but should still achieve the overall intent of the programme.

For example, when auditing measuring equipment, consider combining the audit with the processes where measurement takes place and where the results of measurement are used; this way the sampling can be related to the results through the measurement process. The concept of the “internal customer” should be explored and customer satisfaction between internal functions should be considered (e.g. how well does the maintenance function ensure equipment up-time?).

How does one develop an audit plan?
Development of an audit plan should be done in collaboration with the certification client;
to discuss the time allocation, whether there are any particular issues that should be included in the audit and access to people, locations and documented information. As far as possible, it is advisable to obtain necessary information before planning of the audit commences.

**USEFUL TIPS TO AUDITORS**

- Develop a plan to give value to the organisation and satisfy requirements of Accreditation Bodies
- Plan to audit linked processes to explore synergies and “internal customer” issues
- Audit plans should be developed with the auditee if possible
- Available documented information should be reviewed before the audit to aid time allocation and understand sampling
- Checklists can improve the quality of audits but understand how they can and design them to promote the quality of audits (*Please, see ISO 9001 Auditing Practicing Group Guidance on: Checklist*).
- Use the outcome of Stage 1 audit to plan the stage 2 (*Please, see APG paper on Value of 2 stage audits*). It is strongly recommended to conduct Stage 1 audit at the client’s premises.
- Based on the outcome of Stage 1 or previous audits allocate more time to processes and/or areas with “higher risk”
- Develop the plan around the processes – not the clauses of the standard.
- Linked processes are best planned to be audited together and by the same auditor so that the linkages and interdependencies can be explored in the audit.
- Arrange an interview with Top Management straight after opening meeting for evaluation of context of the organization, strategic direction, understanding of relevant interested parties and leadership.
- Conduct the audit of “internal audit” last
- Consider whether aspects of a system where there is no standalone process can be audited as part of observation or interviews with auditees. If this approach is used, it is good policy to include, on the audit plan, a statement such as “The conformity to all relevant requirements of ISO 9001 will be verified during the audit of related processes”.

Examples of such areas where there may be no standalone process include:

- Awareness of Quality Policy
- The effectiveness and commitment of leadership
- Internal/external communication and awareness
- Fulfilment of objectives and link to the overall objectives (but it is recommended to ask top management about the way they set objectives)
- Process environment and infrastructure
- Competence of people (an understanding of the work people perform; can ensure the relevance of recorded experience, skills, training and knowledge; alternatively this can be audited with Human Resources if there is such a function).
- Documented information: (evidence of control, types of documents etc. This can then be used to provide input for the auditing the process of retaining and maintaining documented information).
- Improvement
Table 1: Extract of an example audit plan, considering this approach:
